

For every image a clipping, calibration, and filtering have been done. I wanted to perform an orthorectification afterwards but have not been able to do so.

In this image we can see that the road BV-5128 is affected by the Gloria as the VH image polarisation from Sentinel-1 shows at 2nd February 2020 (after the effect).

Both polarisations have been studied VH and VV and images from before and after the Gloria have been checked.

This last image represents floodings in areas close from Pineda de Mar and C-32.
